

RUNA API

The Runa API is built for fast, seamless digital value payouts at scale

Why integrate the Runa API?

 <p>Grow your business with a lightning fast API</p> <p>The Runa API enables faster response time, can high significantly higher order volumes and offers industry-leading uptime. This means you can send hundreds of payouts at once and rely on Runa as you scale.</p>	 <p>Save time with streamlined ordering</p> <p>With the Runa API you can order up to 500 payouts instantaneously and combine different payout types in the same order. Choose your preferred delivery method for your recipients.</p>	 <p>Manage your money with ease</p> <p>With the Runa API, you can fund into your account with your preferred payment method, access upfront flat rate discounts and review transparent credit card fee estimates making it more straightforward for you to manage your budgets.</p>
--	---	---

What is staying the same?

-  Access to an industry-leading network of payout types with more coming on Runa.
-  You will keep the same account login details, we will move over any funds from your Connect account and carry over the last 3 months of data. Further data available on request.
-  The same great support and your Account Manager.

Unlock immediate improvements through the Runa API

We're here to help

We want to make sure that your migration to the Runa API will be an easy, one time integration. The API is designed to be easy to integrate and is built so that you will not need to make significant development changes in the future.

-  Visit the [Runa Developer Hub](#) to learn more.
-  Join our [dedicated Slack channel](#) for support from our Product & Engineering teams.
-  Speak to your Account Manager who can help with any questions.

BUILD FOR THE FUTURE

Integrating now saves and simplifies work in the future

We are investing in the Runa API to give you the best possible experience and serve your evolving business needs. We are committed to new feature development including new countries, new asset types and new functionality in the Runa API.
